DETAILED ACTION

Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Michael J. Guznizak, #59,502 on August 23, 2010.

The application has been amended as follows:

- Claim 13 (Currently Amended), "A non-transitory computer-readable storage medium on which is stored an image processing program for an image processing apparatus executing an error diffusion process to" (Emphasis added); [Note: the claim amendment is also stated on page 12, Remarks, 07/07/2010].
- The title of the invention is changed (MPEP 606.01): Image Processing Apparatus and Method for Executing a Process of Error Diffusion (Emphasis added).

Allowable Subject Matter

2. The following is an examiner's statement of reason for allowance.

The primary reasons for allowance for claims 1, 7, 13, and 25-29 are the inclusion of the limitations in the amended claims.

Claim 1 is directed to an image processing apparatus for executing an error diffusion process to color data which have a plurality of density components. Claims 7 and 13 are directed a method and a non-transitory computer-readable storage medium, respectively. Both claims 7 and 13 recite identical features corresponding directly to the function of device elements in claim 1. Claims 25 and 28-29 are the dependent claims to claim 1. Claims 26 and 27 are dependent claims to claim 7 and 13, respectively.

Claims 1, 7 and 13 identify the uniquely distinct features of "wherein a color reproduced by an image forming unit according to the first density component is similar to a color reproduced by the image forming unit according to the second density component, and wherein a highest density reproducible by the image forming unit according to the first density component is lower than a highest density reproducible by the image forming unit according to the second density component."

Prior art Tajika et al (US 5,142,374) teaches "a processor and a memory; a first processing unit that executes the error diffusion process to the first density component; a second processing unit that executes the error diffusion process to the second density component by, wherein the error diffusion process executed by the second processing unit requires a lighter processing load than the error diffusion process executed by the first processing unit; and an error diffusion processing control unit that controls to execute, by the first processing unit, the error diffusion process to the first

density component, and controls to execute, by the second processing unit, the error diffusion process to the second density component, wherein the first and second density components have respective different component types and wherein one dot output based on the first density component has a lower density than one dot output based on the second density component", and prior arts Hong et al (US 6,614,556) and Shibaki et al (US 2001/0019632) teaches "modulating at least one of a quantization threshold value and a quantization diffusion coefficient on the basis of the first density component, and using at least one of a quantization threshold value and a quantization diffusion coefficient on the basis of the first density component", and "using a fixed modulated quantization threshold value and a fixed quantization diffusion coefficient", respectively.

However, references Tajika, Hong and Shibaki, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Furthermore, the prior arts in the record, i.e. Takano et al (US 6,642,031), Nomura, Mayumi (US-5,708,728), and Fujimori, Yukimits (US-6,328,404) either singularly or in combination, fail to anticipate or render the above underlined limitations obvious. In addition, the examiner does not find any other references anticipate or suggest in the above underlined limitations. Therefore, the invention appears as a unique and non-obviousness invention, and because of this reason, claims 1, 7, and 13 and their dependent claims 25-29 are allowable.

Reference Prior Arts

3. The closest prior arts in the record are Tajika et al (US 5,142,374), Hong et al (US 6,614,556) and Shibaki et al (US 2001/0019632), Takano et al (US 6,642,031), Nomura, Mayumi (US-5,708,728), and Fujimori, Yukimits (US-6,328,404).

Comments By Applicant

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Contact Information

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven Kau whose telephone number is 571-270-1120 and fax number is 571-270-2120. The examiner can normally be reached on M-F, 8:30am-5pm.
